

AMENDMENTS TO THE CLAIMS:

This listing of the claims will replace all prior versions, and listings, of the claims in this application.

Listing of Claims:

1. (Original) A system (10) for supplying data in electronic form comprising a mobile terminal (14), a supplying terminal (12), and a wireless connection, the supplying terminal being able to supply at least part of the electronic data to the mobile terminal by communication over the wireless connection, characterised in that the supplying terminal is able to obtain electronic data from at least one data server (18,20) by communication over a wireless network (24).
2. (Original) A system (10) according to claim 1 in which there is a plurality of data servers (18,20) to supply electronic data to the supplying terminals.
3. (Currently Amended) A system (10) according to claim 1 ~~or claim 2~~ in which the supplying terminal (12) acts as a proxy between the mobile terminal (14) and the data server (18, 20).
4. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which transfer of electronic data between the at least one data server (18, 20) and the supplying terminal (12) is carried out securely.
5. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which transfer of electronic data between the supplying terminal (12) and the mobile terminal (14) is carried out securely.
6. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the supplying terminal (12) is a vending machine which supplies electronic data in exchange for a monetary payment.

7. (Original) A system (10) according to claim 6 in which the supplying terminal (12) and mobile terminal (14) exchange information necessary to enable payment to be made for the electronic data supplied to the mobile terminal.

8. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the mobile terminal (14) and the supplying terminal (12) communicate by the Wireless Application Protocol (WAP).

9. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the wireless network (24) and the wireless connection operate using different carrier frequencies.

10. (Original) A system (10) according to claim 9 in which the wireless network (24) uses a carrier frequency which is lower than the carrier frequency of the wireless connection.

11. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the wireless network (24) is provided by a cellular network.

12. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the wireless connection is a connection between the mobile station and the supplying terminal in a pico-cell.

13. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the wireless connection is a Low Power Radio Frequency (LPRF) connection.

14. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which wireless network (24) obtains the data from a second network which is a wired network.

15. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the wireless network (24) obtains the data from the Internet via a gateway.
16. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the data transmitted to the mobile terminal (14) from the supplying terminal (12) is only part of the data transmitted to the supplying terminal by the or each data server (18, 20).
17. (Original) A system (10) according to claim 16 in which a user of the mobile terminal (14) determines the part of the data which is transmitted.
18. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the electronic data obtained from at least one data server (18, 20) is determined by a person controlling operation of the supplying terminal (12).
19. (Original) A system (10) according to claim 18 in which the configuration of electronic data within the supplying terminal (12) is determined by the person controlling operation of the supplying terminal.
20. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the price at which the electronic data is sold is determined by a person controlling supply of that electronic data to mobile terminals (14).
21. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the mobile terminal (14) is a mobile telephone.
22. (Currently Amended) A system (10) according to ~~any of claims 1 to 20~~ claim 1 in which the mobile terminal (14) is selected from a group consisting of game playing devices, portable audio players, portable video players, personal digital assistants and smart telephones.

23. (Currently Amended) A system (10) according to ~~any preceding claim~~ claim 1 in which the data in electronic form is uploaded to the supplying terminal in an operation that is independent from a request being made for the data in electronic form by the mobile terminal.

24. (Original) A method for supplying data in electronic form comprising the steps of:
providing a mobile terminal (14);
providing a supplying terminal (12);
providing one or more data servers (18, 20);
providing a wireless connection for enabling data transfer between the mobile terminal and the supplying terminal; and
the supplying terminal obtaining data from at least one data server by communication over the wireless network,
characterized in that the method comprises the steps of providing a wireless network (24) for enabling data transfer between the supplying terminal and data servers and the supplying terminal transmitting at least part of the data to the mobile terminal over the wireless connection.

25. (Original) A supplying terminal (12) for supplying data in electronic form comprising first communication means (32) for receiving data from at least one data server (18, 20) over a wireless network (24) and second communications means (34) for sending at least part of the data to a mobile terminal (14) over a wireless connection, characterized in that the first communication means is wireless communications means for receiving data from at least one data server (18,20) over a wireless network (24).
